DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, claim(s) 1-24, 37-39, and 56-58, drawn to a radiation sensitive composition and corresponding imageable element classified in 430/270.1.

Group II, claim(s) 25-36, 40-55, and 59-68, drawn to a positive working lithographic printing plate precursor and method of making classified in 430/302.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the radiation sensitive composition which may be employed on any substrate to form a pattern under any type of exposure is not required to be employed as a positive working resist to be coated onto a printing plate type substrate. The composition may be employed to form a pattern on a semiconductor substrate such as a silicon wafer, and may include additives to make it either a positive or negative working composition.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
